DETAILED ACTION

Status of Claims

1. Claims 1 and 3-10 are canceled in view of the preliminary amendment filed 13 April 2004. Therefore, claim 2 is currently under examination.

Specification

2. The amendment to the specification filed 13 April 2004 is entered.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claim 2 is rejected under 35 U.S.C. 102(e) as being anticipated by Wang US 6,395,152 B1(Wang).

Wang teaches an electropolishing apparatus comprising an end-point detector system employed to determine when to stop the polishing process. The end-point detector of Wang measures the electrical resistance from edge to edge of the wafer and the resistance signal is sent to a computer which monitors the electrical resistance and send signal to stop the polishing process when the electrical resistance changes rapidly(col. 13 lines 40-63).

Art Unit: 1742

Regarding claim 2, Wang inherently teaches the claimed resistance measuring unit and the claimed termination point detecting unit and the electropolishing apparatus of Wang is capable of "measuring electric resistance of said conductive film and a etching stopper film formed on said substrate" and "detecting a termination point of polishing by reading a variation resistance value of said conductive film and said etching stopper film measured by said resistance measuring unit" as claimed.

Therefore, Wang anticipates the instant claim 2.

Double Patenting

5. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

6. Claim 2 is rejected under 35 U.S.C. 101 as claiming the same invention as that of claim 1 of prior U.S. Patent No. 6,736,699. This is a double patenting rejection.
